

HW06 Consolidated Bug Report

Status: POSTED AND RECONCILED — six new HW06 GitHub Issues were opened on 2026-08-28; **BUG-PB-002** was added as HW06 evidence to existing Issue 28 instead of creating a duplicate. MSSV-tagged screenshots were generated from the real Newman/SQLite evidence.

Failure triage summary

Pool	Final executed case verdict	Genuine defect root causes	Runner/test issues excluded	Evidence limitations
A / FR-03	29 passed / 26 failed	3	1 corrected double-slash diagnostic	Three redacted MSSV screenshots generated
B / FR-08	29 passed / 13 failed	2	2 corrected diagnostics (StudentID case and regex serialization)	Cart clearing remains unverified; two MSSV screenshots generated
C / FR-15	30 passed / 37 failed	3	1 corrected double-slash diagnostic	Two MSSV screenshots generated; one known issue reused
Total	88 passed / 76 failed	8	4	Seven evidence screenshots generated

Pool B's Newman-only result was 41/1; restricted SQLite evidence independently identified 12 additional server-total failures. That produces the final 29/13 verdict without double-counting **FR08-DOM-007**.

Evidence-backed defects

Bug	Pool/API	Failed cases	Severity	Evidence	GitHub status
BUG-PA-001 — four-digit OTP generated instead of six digits	FR-03 forgot-password	26 cases / 27 assertions	High security/functional	Pool A Newman JSON/HTML and CLI	Opened as Issue 68
BUG-PA-002 — invalid new passwords accepted	FR-03 reset-password	9 cases	High validation/security	Pool A Newman and fixture snapshots	Opened as Issue 70

Bug	Pool/API	Failed cases	Severity	Evidence	GitHub status
BUG-PA-003 — new password persisted as plaintext	FR-03 reset-password	Dedicated persistence evidence	Critical security	Redacted before/after boolean fixture evidence	Opened as Issue 69
BUG-PB-001 — JSON array creates null-valued order	FR-08 checkout	1 case	Medium	Pool B Newman + redacted order snapshot	Opened as Issue 71
BUG-PB-002 — checkout trusts client total	FR-08 checkout	12 cases	High data integrity	Pool B Newman + per-case SQLite totals	HW06 evidence added to existing Issue 28 ; duplicate avoided
BUG-PC-001 — missing/invalid/non-admin credentials can update products	FR-15 update	16 cases	High authorization	Pool C Newman + isolated SQLite state	Opened as Issue 72
BUG-PC-002 — invalid required product fields are persisted	FR-15 update	18 cases	High validation/data integrity	Pool C Newman + isolated SQLite state	Opened as Issue 73
Existing BUG-FR15-011 — false success for missing product	FR-15 update	3 cases	Known issue	Pool C Newman + zero-mutation state	Existing Issue 52 ; no duplicate draft

Detailed reproduction steps, expected/actual results, sources, impact, and draft issue bodies remain in each Pool's [stage5-bug-report-proposal.md](#).

False positives and evidence gaps

- Discarded URL/header/assertion diagnostics are test-script issues, not SUT defects. All were corrected and rerun before triage.
- Pool B cart clearing has no approved non-GET observation method and remains unverified.
- SQL-looking Pool C values did not demonstrate SQL execution; their failures were validation or the known zero-row false-success behavior.

- Six new Issue URLs and two reused Issue URLs are recorded above. Seven MSSV 23127379 screenshots were generated from the redacted Newman/SQLite evidence during the posting session; no OTP, password, or bearer-token value was intentionally retained in the final evidence views.
