

HW06 Newman CI/CD Report — Submission Reference

Status: STUDENT DECISION CONFIRMED WITH KNOWN DEVIATIONS.

The complete canonical report is [reports/HW06_CICD_Report.md](#), and the workflow is [.github/workflows/hw06-newman.yml](#).

Verified pipeline facts

- Trigger: qualifying pushes to [main/master](#).
- Runtime: Node.js 20, backend [node server.js](#), Newman 6.2.2.
- Readiness: TCP port 3000 only; no HTTP GET health check.
- Scope gate: rejects GET and out-of-scope request definitions and verifies collection-level [StudentID](#) header injection.
- Execution: Pool A, B, and C Newman runs; CLI/JUnit evidence upload; preserved exit codes.
- Real run: [Actions job 98890567631](#), commit [61e0baea](#), artifact [hw06-newman-33183542319-1](#).
- Real result: 159 cases, 96 passed, 63 failed; screenshot [reports/CI-fail-sample-2.png](#).

Required samples and deviation

Requirement	Evidence	Status
All 159 cases pass	No run, URL, artifact, or screenshot exists	Literal requirement not met; student declined to modify the SUT or weaken reviewed tests
Exactly one case fails (158/159)	No such run exists	Literal requirement not met; student substituted the real 96/63 failed run
Instructor-approved exception	None supplied	User action required if formal acceptance of the substitution is needed

The substitute proves that the workflow executes all suites, uploads evidence, and propagates test failure. It is not described as an all-pass or exactly-one-failure run.
